

Business intelligence tools and their applications

As you advance in your business intelligence career, you will encounter many different tools. One of the great things about the skills you have been learning in these courses is that they're transferable between different solutions. No matter which tools you end up using, the overall logic and processes will be similar! This reading provides an overview of many of these business intelligence solutions.

Tool	Uses
Azure Analysis Service (AAS)	<ul style="list-style-type: none">• Connect to a variety of data sources• Build in data security protocols• Grant access and assign roles cross-team• Automate basic processes
